

Introduction of the valve

Resilient seated butterfly valve is a Double Flanged design which can be used for dead-end service. This butterfly valve series has many of the design features and benefits, such as high Cv ratings, minimum parts exposed to the line media, greater reliability and a proven record of long service life. A major design advantage of this valve product line is international compatibility. The same valve is compatible with most world flange standards – ASME Class 125/150, BS 10 Tables D and E, BS 4504 PN 10/16, DIN PN 10/16, AS 2129 and JIS 10K. In addition, the valves are designed to comply with ISO 5752-Table 2 (EN 558 Table 13) face-to-face and ISO 5211 actuator mounting flanges. Therefore, one valve design can be used in different world markets. Double flange butterfly valves are designed to the requirements of BS EN 593

Applications

The products are used in a wide range of industries worldwide including:

- Chemical
- Beverage
- Brewing/Wine Making
- Pharmaceutical
- Food Processing
- Petroleum Refining & Oilfield
- Transportation
- Ultrapure Water
- Marine
- Pulp & Paper
- Mining
- Power/FGD
- Nuclear Power
- Irrigation
- Water & Wastewater Treatment

Head losses
Formulae for calculation of rate flow

Notes: Values indicated in this page is only for information

Liquids: $Q = \frac{KV}{\sqrt{\frac{PS}{\Delta P}}}$

Q rate of flow (m³/h)

PS specific gravity (water=1)

ΔP pressure drop (bar)

Gas: $Q = 28.5 \frac{KV}{\sqrt{P_2 \cdot \Delta P}}$

Q rate of flow (m³/h)

PS specific gravity (air=1)

ΔP pressure drop (bar)

(less than 1/2 inlet pressure)

P₂ outlet pressure

Steam: $Q = 22.5 \cdot KV \cdot \sqrt{P_2 \cdot \Delta P}$

Q rate of flow (Kg/h)

ΔP pressure drop (bar)

(less than 1/2 inlet pressure)

P₂ outlet pressure

Calculation of the rate of flow equivalent to H₂O:

For different liquid, gas or steam head losses are determined by equivalent water of flow, as follows:

Q_e equivalent water flow

(m³/l o l/s)

Q fluid flow

(m³/l o l/s)

d fluid specific gravity

(Kg/mc)

Values CV (CV=1.16KV)

Installation Instructions

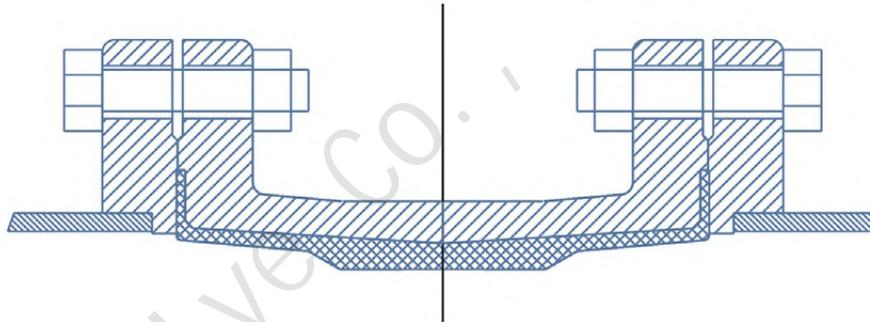

The butterfly valve can be installed on the pipeline, which is at any angle.

1. The valve should be installed in the location being sure to provide convenient operation, maintenance and replacement.
2. As mounting the butterfly valve, fail to consider flow direction of mediums in pipeline, that is to say, the valve can be used in double way.
3. Before installation, the butterfly valve should be stored in ware house and prevent it from moisture and in so doing, the disc should be kept to open at an angle of 15 degree.
4. Before installation, the following processes should be completed:
 - (1) Check carefully and confirm the operation condition of the valve is in line with the technical specification and requirements.
 - (2) Clean the disc sealing area and body sealing completely. It is not permitted to open the disc before cleaning.
 - (3) Check and confirm the handle is strongly collected to the flange and stem.
5. As mounting the butterfly valve in pipeline, the load for tightening connection bolts should be uniformed.
6. After installation, the disc must be opened in the case of the strength pressure test on pipeline being carried out.
7. After being installed, the valve should be examined regularly. The main item to be checked are as follows:
 - (1) Whether the valve seat and 'O' sealing ring have been damaged.
 - (2) Check the sealing effects of the disc sealing area.
 - (3) After the valve was examined and assembled, no scuffing happens at the time of on-off rotation.
 - (4) After the valve was examined and assembled, the sealing test should be carried out as the introduction.
 - (5) After each examination, detailed records should be filed for reference.

Work principle

This product mainly consists of body, stem, disc, seat AL-Bronze bushings etc. The rotation of actuating device makes stem and disc revolved, which ensures on-off operations and flow control.

The rotation of the actuating device ensures dependability and position disc control and position disc control and water flow control. Rotate handle wheel clockwise, the valve is close.

Features

1. Absolutely tight sealing with flow in either direction
2. The valve body and disc are accurately machined which results in low operating torque and long service life and reliability
3. Triple shaft bearings prevent shaft deflection and guarantee optimum guidance even after many years of operating service
4. Can be disassembled, material-specific recycling possible
5. Single flange mounting is possible
6. Can be installed in any desired position
7. Maintenance-free
8. Fully repairable valve GENERAL

Trouble & remedy

| Trouble | cause | remedy |
|--|---|---|
| Leakage in sealing area | Disc sealing area or body sealing seat scratched, disc is not closed completely. Hexagonal socket head bolts on clamping ring are not tightened completely. | Repair the disc sealing replace repair the body sealing seat, adjust actuator to close the disc completely, tighten loosed hexagonal socket head bolts. |
| Leakage in shaft end | The seat or The 'O' ring is not pressed completely. | Replace the body sealing seat |
| Leakage in joint area between valve face and relevant flange on pipeline | Connection bolts are not screwed up uniformly. | Tighten the connection bolts evenly. |
